

Dark Matter and Its Existence

Cosmology

A closer look at earlier contributions
by Josef Kemény, 18/04/2009

Science has never been as divided as it is now. There are multiple theories about the basic construction of Universe: quantum mechanics, the standard model, M-theory, extra dimensions, string theory in five different versions, super symmetry and the latest contribution is the standard cosmological model.

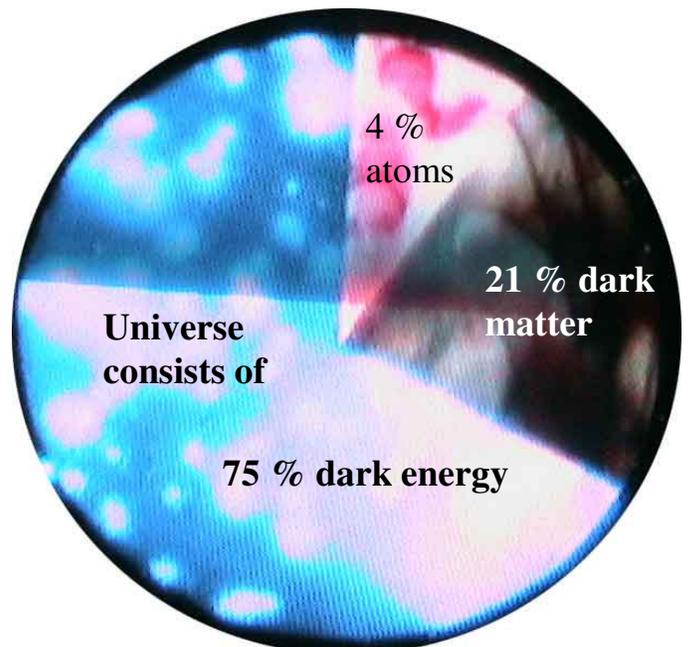

Professor Mike Disney, astronomer at Cardiff University has a clear opinion of today's science: "they are not supported by physics basics. The main obstacle in science is illusory knowledge – the illusion of knowing what is going on. Because we don't. It is similar to the question of God's existence. We really want to know the answer but evidence, the scientific evidence establishing the existence of God, cannot be found. It cannot be verified. Cosmology is close to religion and that makes me suspicious," he says. - It is true that religion walks hand in hand with science.

Another professor's view on today's science is this: "Earlier, when we maintained that we had all the answers, we had some of them, but we also missed out on parts. My guess is that that is also the case now." – This is how a thinking scientist argues. And there are several scientists sharing this idea of today's science. They are right, because if you do not have total knowledge of Universe itself, you are nothing but a philosopher at a higher level of knowledge.

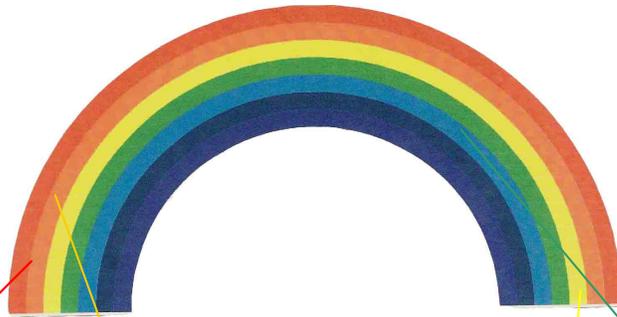

The very latest theory is the standard cosmological model and, according to some scientists, everything tallies. They maintain that Universe consists of 4% atoms, 21 % dark matter (which nobody has been able to find yet) and, finally, of 75 % dark energy. They neither know anything about the power behind the term dark energy. The only thing they have found in the dark energy context is that the galaxies have doubled their velocity. This is due to dark energy, so far it is correct, but there is no knowledge about where the galaxies are heading. There are also scientists who question the existence of dark matter. In other words: it does not exist. A context calling itself scientific should be as stable as possible, as close to reality as possible and at least 95 % of scientists should acknowledge it, but that is not the case today. Today's science regrettably has no context.

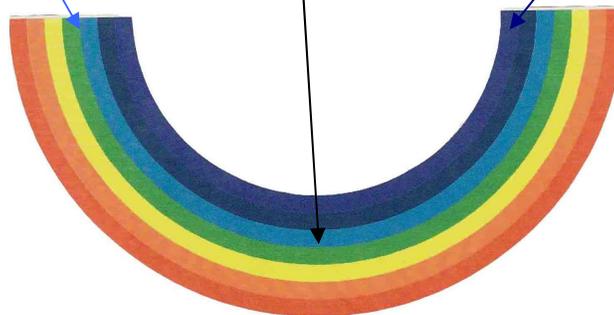

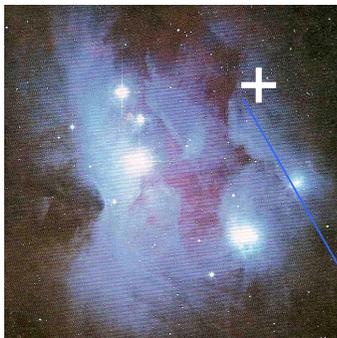

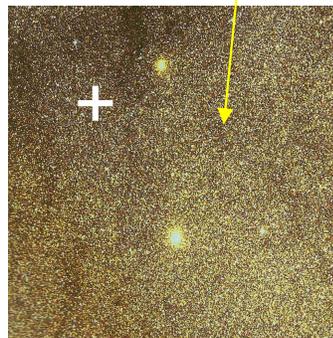

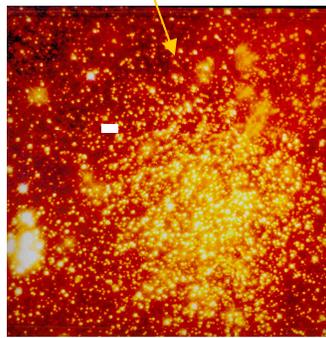

Standard cosmological model

The Rainbow/Arc of Light and its seven different lights

These 7 colours of the rainbow can also be found in our galaxy, as the pictures below confirm. They mark out 7 vibration worlds or 7 dimensions. All seven worlds exist on different levels of vibration/frequency.

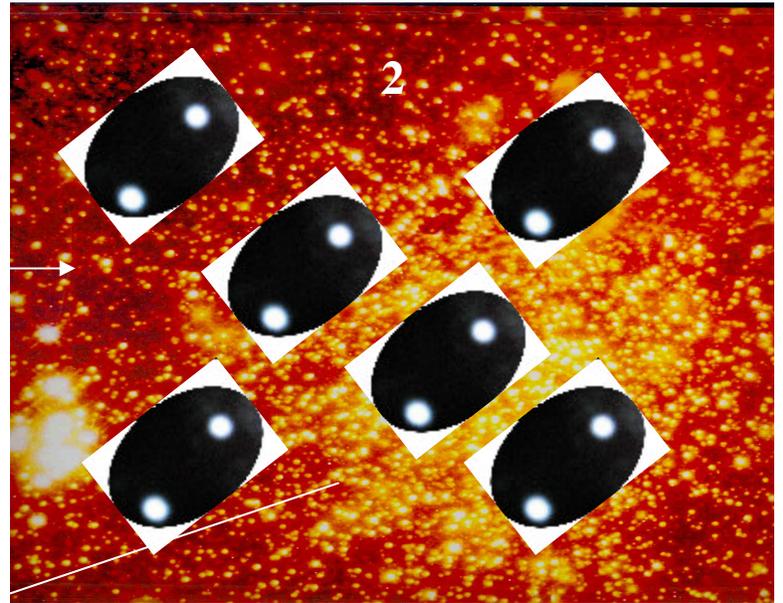

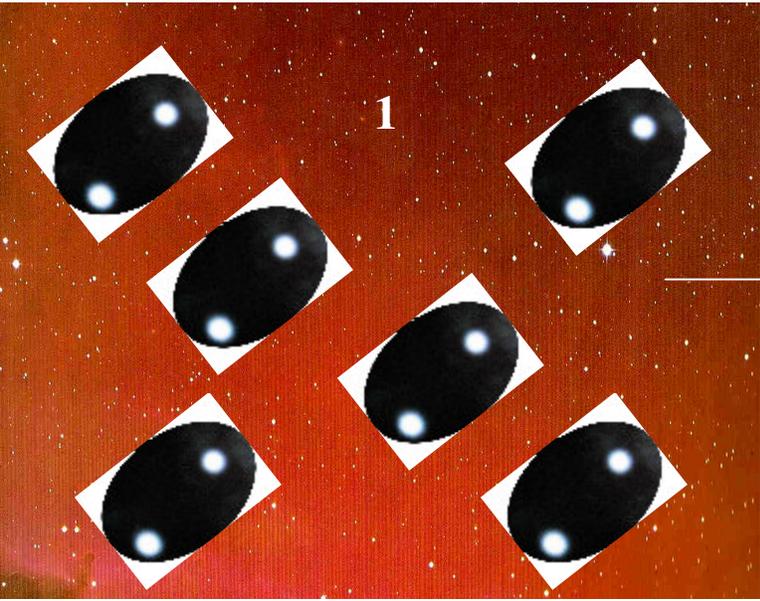

+ = koino matter
- = antimatter
Koino matter = ordinary matter

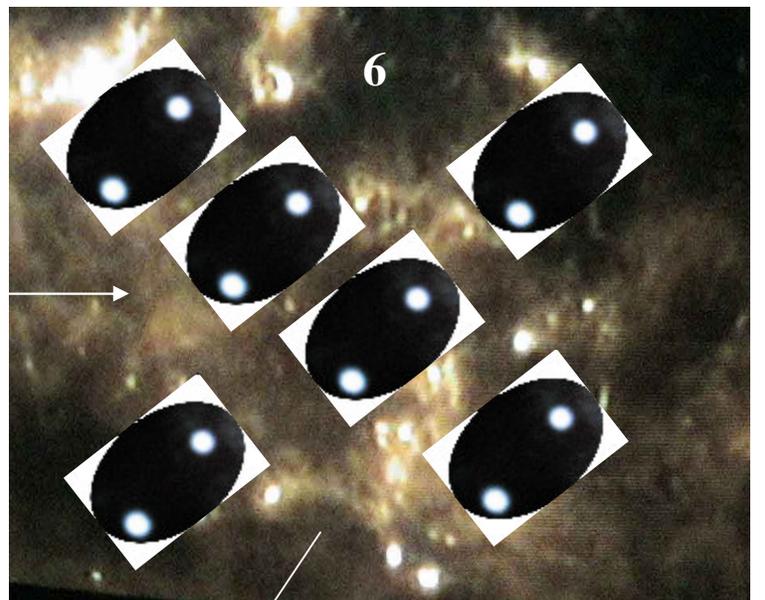

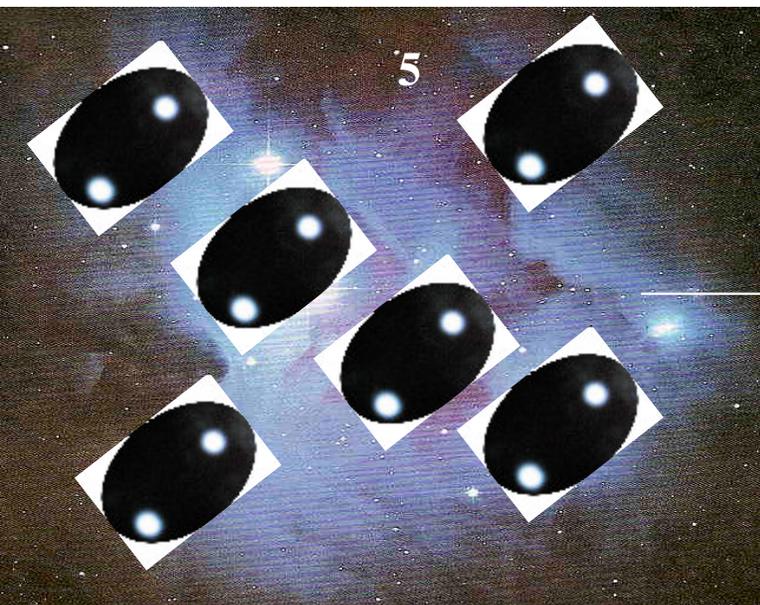

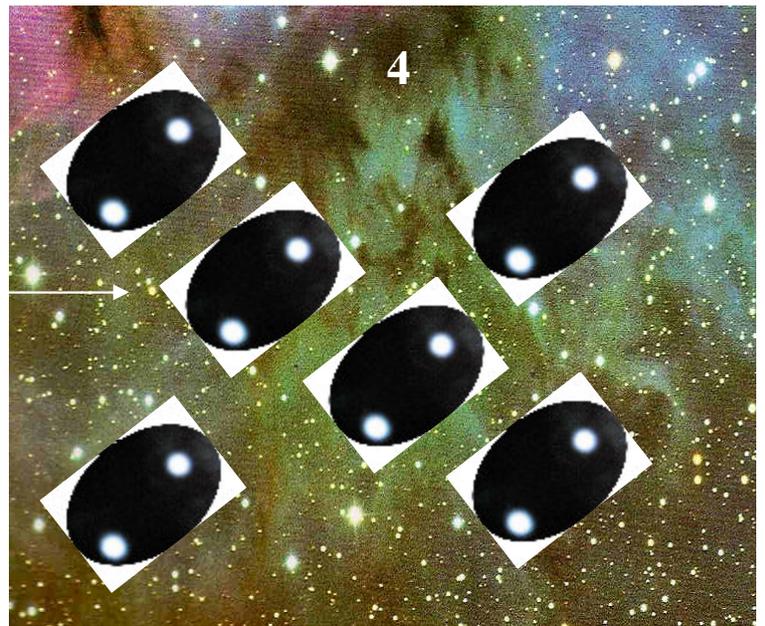

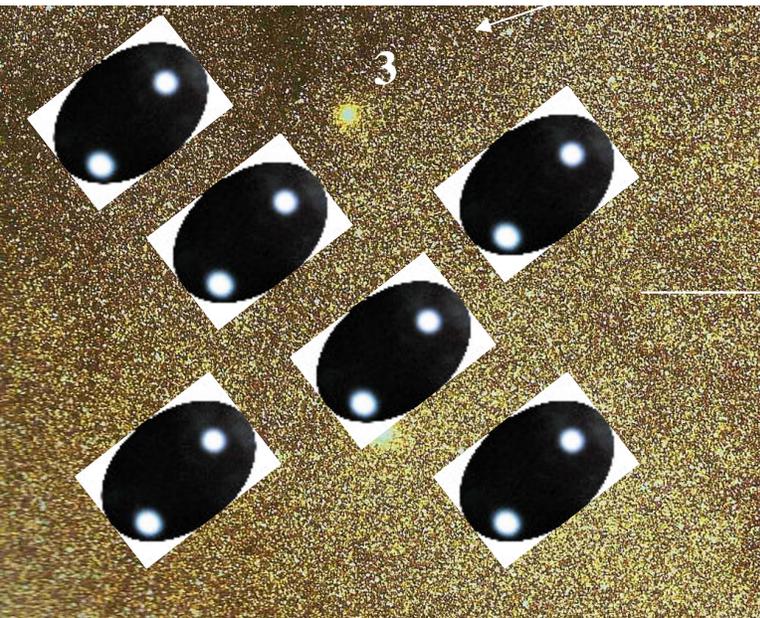

Different-coloured lights consist of waves or particles-photons. These exist on different wavelengths or different levels of frequency. They can be visible or invisible depending on wavelength and level of frequency.

The same goes for stars in empty space, around 65-70% are binary star systems. This is a gigantic atom system for dark matter/macro cosmos.

Note that solar system is the same as atom system.

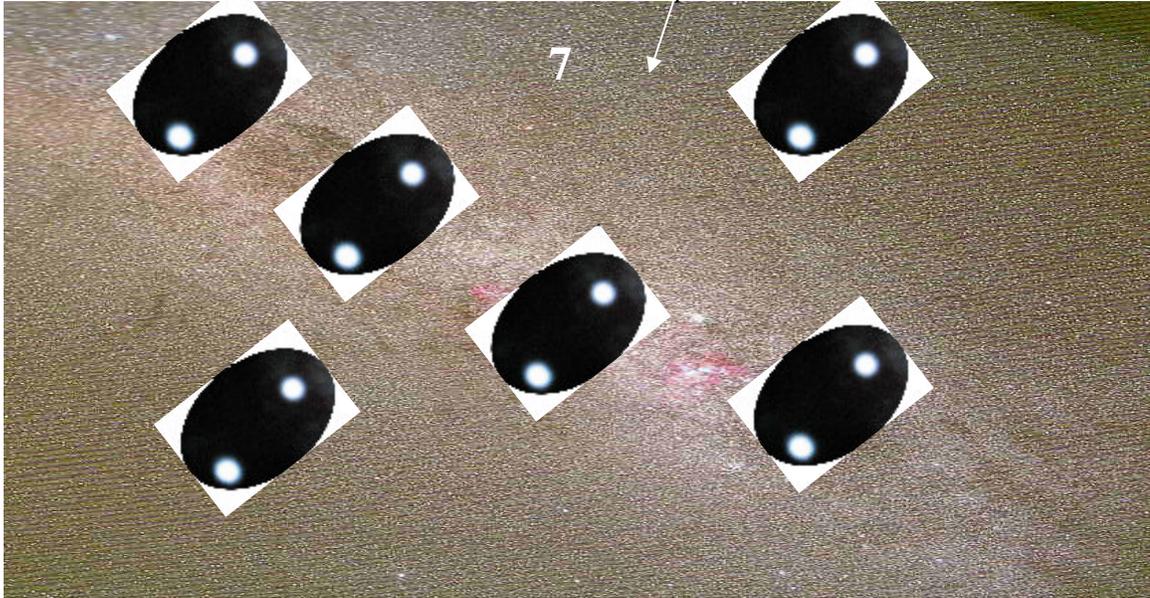

If we reduce the solar system to micro cosmos, we call it atom system and vice versa

If we enlarge the atom system from micro cosmos to macro cosmos we call it star system/solar system

The same process takes place but much, much faster in the micro world/cosmos. Since we exist at a level of vibration, in which a gigantic star system is visible, we are simultaneously microscopically small creatures compared to the star/solar system and find that these continuous processes are very slow. In cosmic time these processes are much faster. All binary star systems are nature's own accelerators without star collisions. See description below.

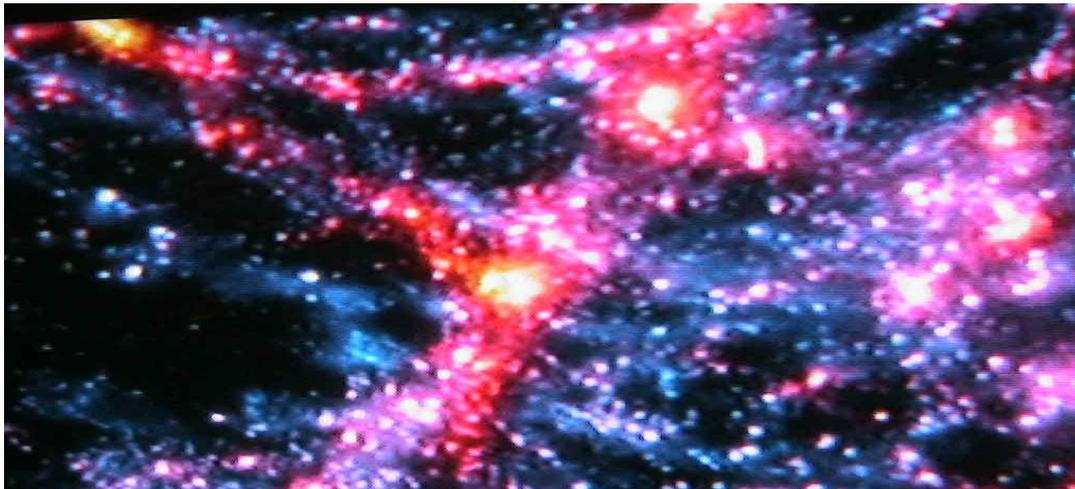

Transformation to a higher vibration/frequency.

If we look into the sky we see billions of stars in the so-called empty space in our galaxy. These stars constitute a gigantic atom system for dark matter. The key to an explanation of how dark matter works or exists can be found in the form of all binary star systems, nature's own accelerators, which exist in the empty space, i.e. in our galaxy.

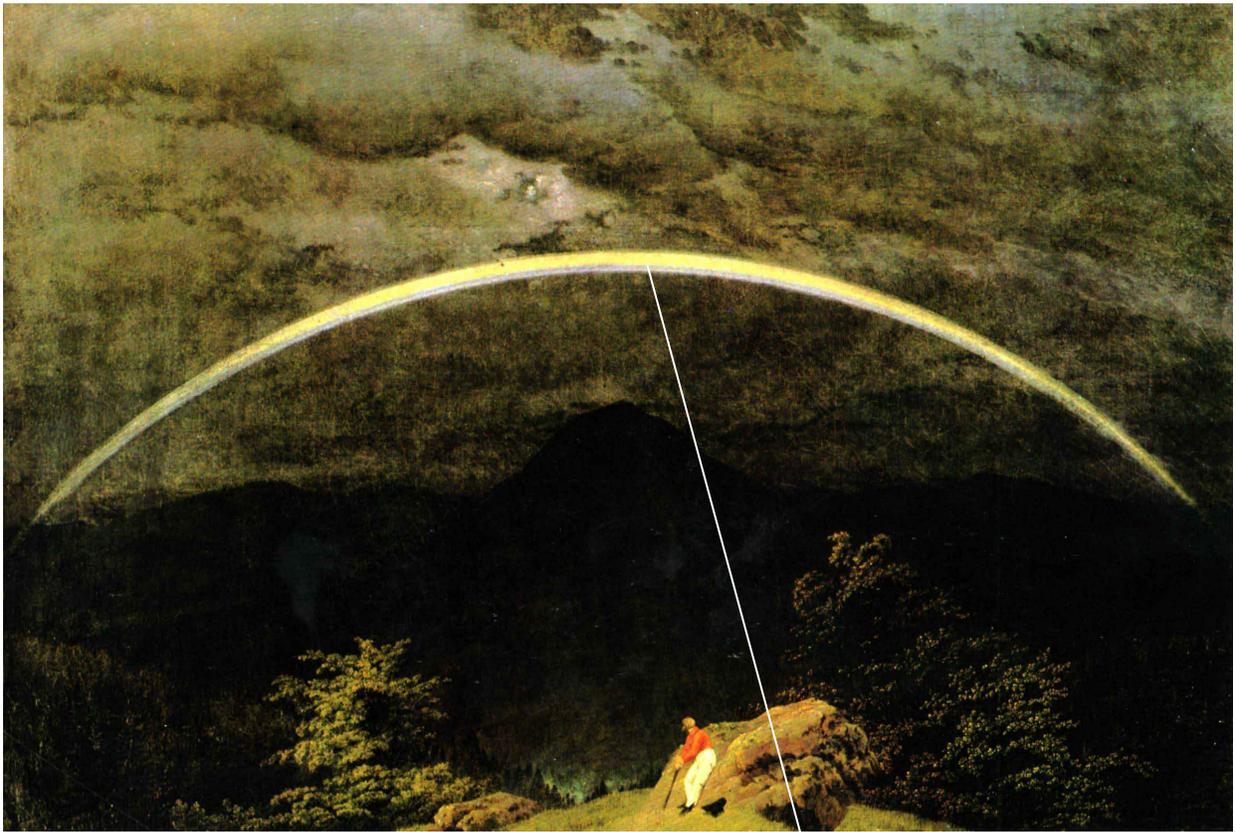

Each binary star system has its own solar system with its own orbiting planets. These two suns, each with its own planets, orbit each other. As one sun orbits or passes the other sun, its magnetic field affects the planets of the other sun to make them accelerate, change orbital direction and vice versa. **See Picture 1.** We see reddish gas clouds, created by active binary sun systems, covering a certain area and by acceleration the celestial bodies are transformed to a higher level of vibration.

We see the same thing happening in **Picture2.** The background seems to be orange-like gas clouds in which the binary stars are very active. The process is the same as in picture 1. The same process also takes place continuously in all pictures. Each light area is in turn transformed to a higher level of vibration and thus we have seven different worlds of vibration, seven different dimensions, each one independent of the others. Note that star systems = atom systems.

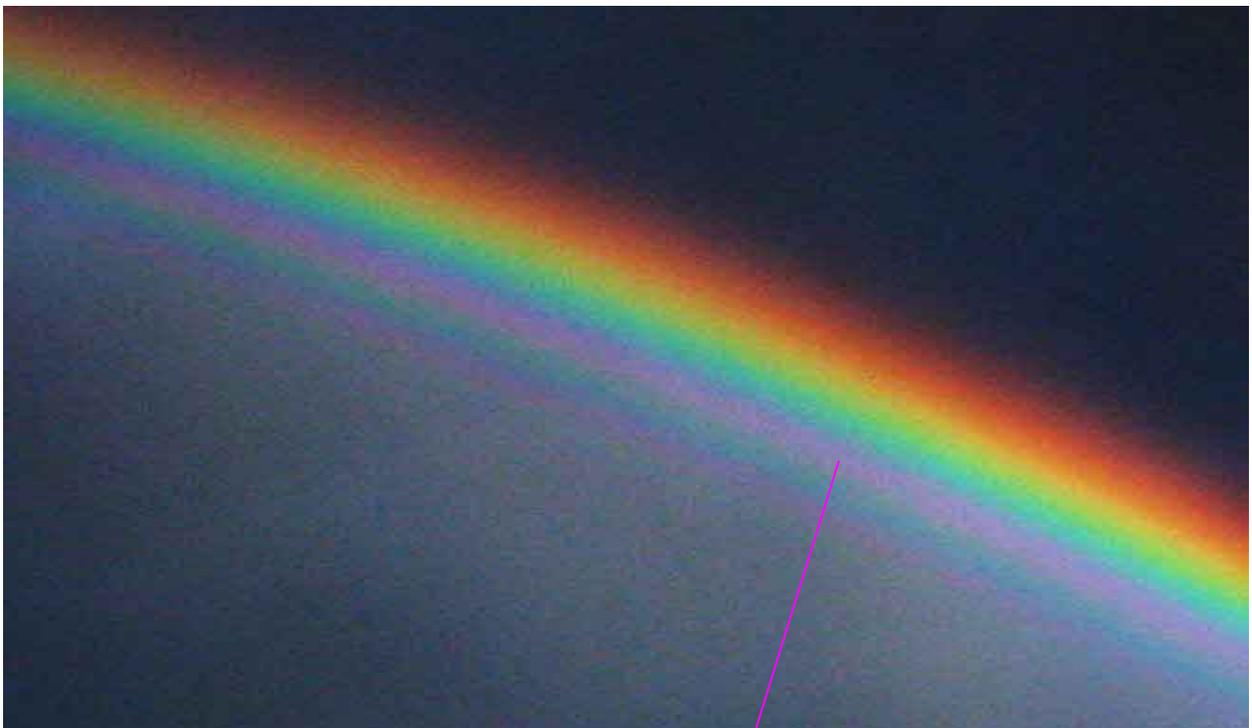

We know that each light/colour has its own wavelength or level of frequency.

This level of vibration is called the World of Death because of the fact that we exist in the world of the stars, the atoms, in which continuous changes take place, resulting in natural catastrophes according to the law and rules of nature.

In this rainbow, except from a yellow colour we see a white or white-greyish colour.

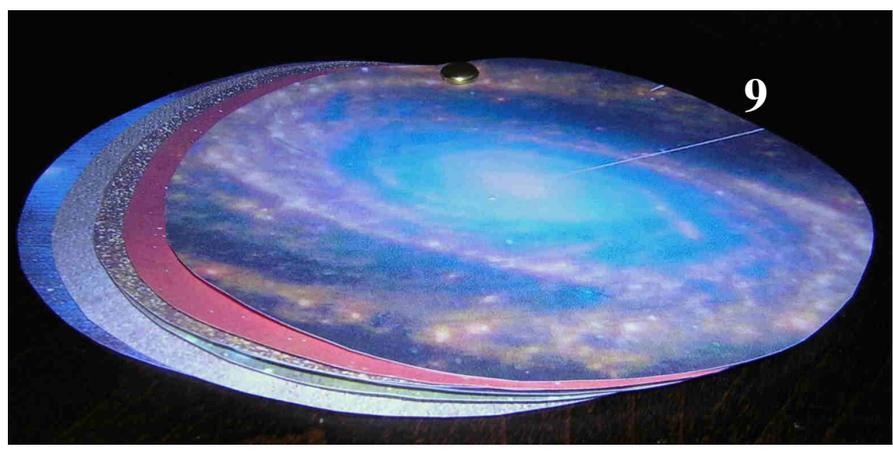

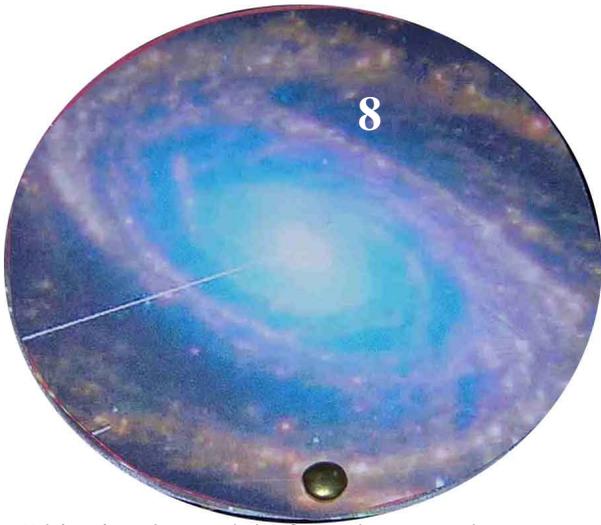

In this rainbow there is also a purple colour.

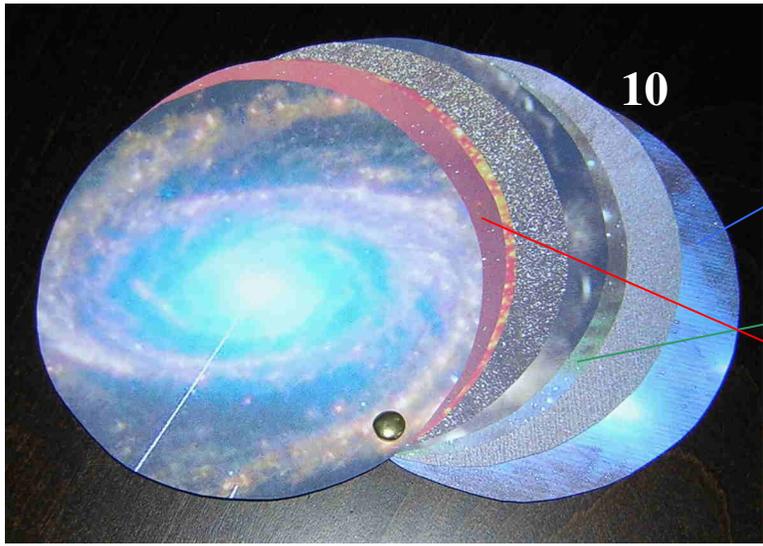

Also in this rainbow we see a purple colour.

In this rainbow, except from a yellow colour we see a white or white-greyish colour

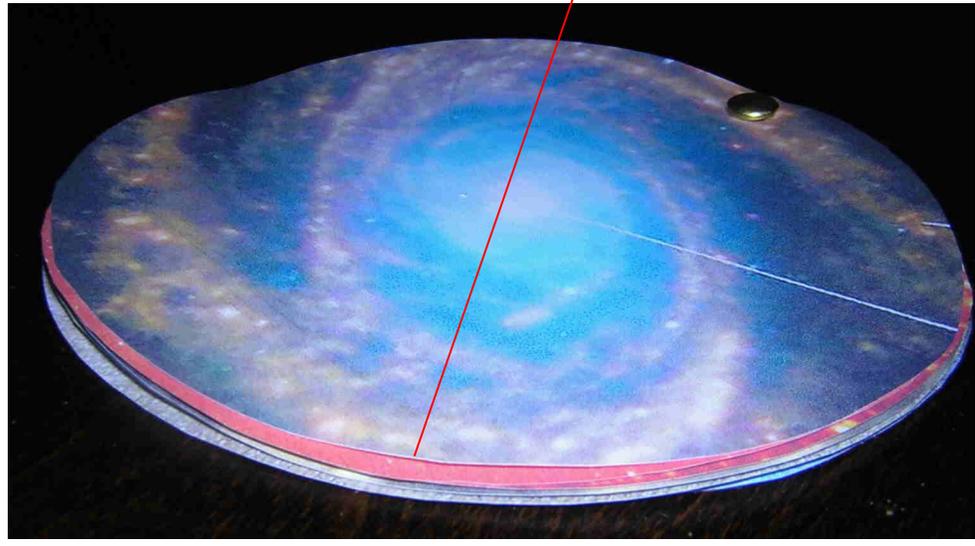

This simple model of a galaxy can be compared to a hand-held fan. With this simple model I am trying to illustrate how dark matter is built, how it works and exists. Picture 8 shows a galaxy seen from above. Picture 9 shows the same galaxy and I try to illustrate seven worlds of vibration (seven dimensions) in the same matter and in the same place.

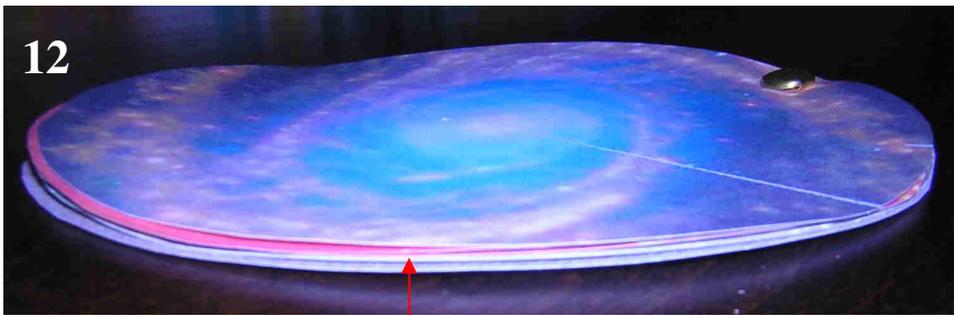

If we have a closer look at the blue-coloured area, we see that blue is dominant. At its higher level of vibration, blue is dominant, the blue light is a basic light. Naturally, the other colours of the rainbow are also there.

If we have a close look at the green-coloured area we find that green light dominates. At its higher level of vibration, green light is its basic light but also there we find the other colours of the rainbow.

In the red area red light is dominant. At its higher level of vibration this is its basic light. Also here we find other colours. And so on.

12

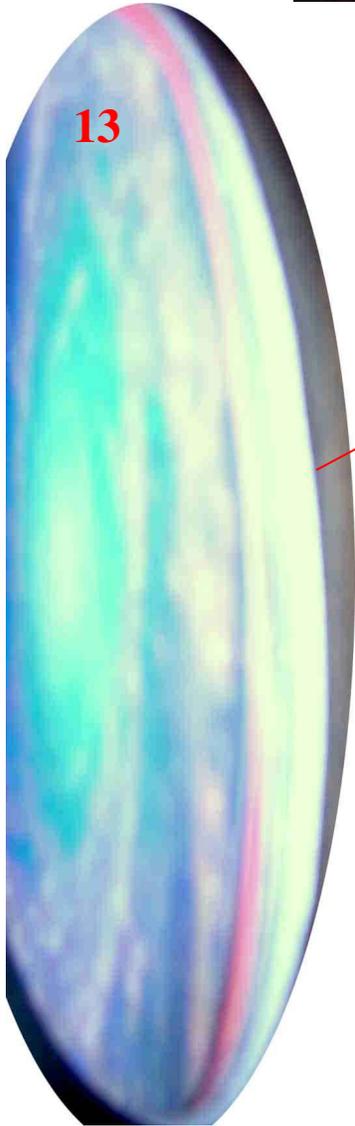

The sum, or all seven levels of vibration, all seven dimensions, together are called "dark matter" since it is invisible.

All seven levels of vibration or dimensions exist in the same matter, in the same place but with different vibrations and independent of each other.

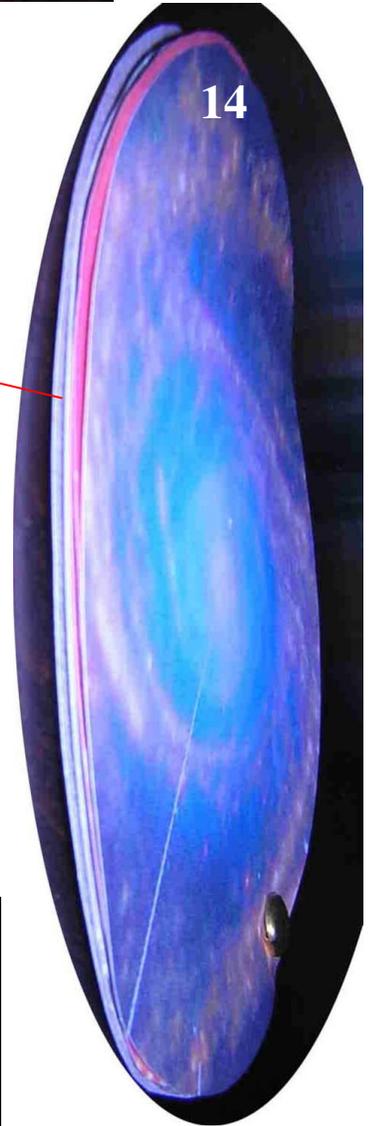

In pictures 12, 13 and 14 I try to illustrate what dark matter is.

Picture 15 is an illustration of the same thing, how different levels of vibration, dimensions, lie together in the same place, the same position. This simple galaxy model is similar to a hand-held fan, as I have already mentioned.

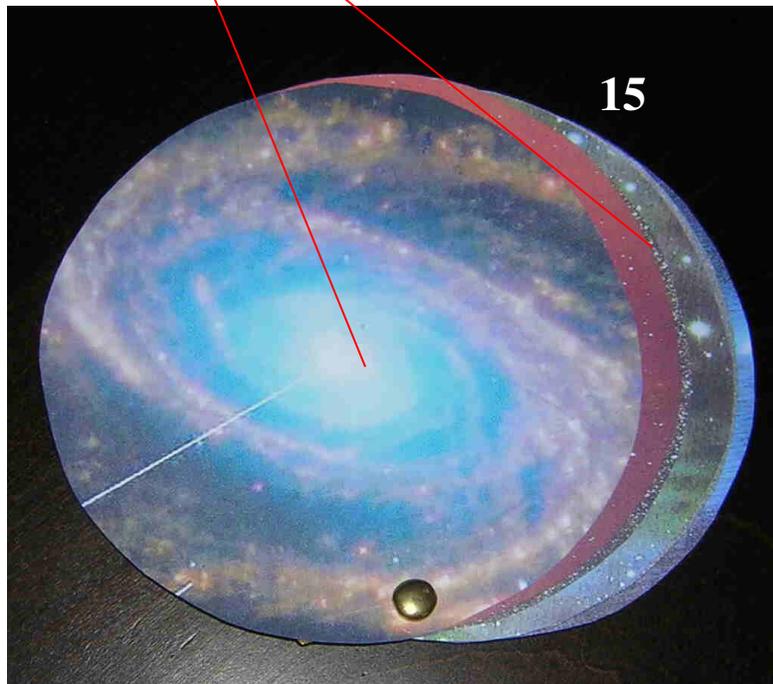

If you understand the principles behind vibration in a matter context, then you understand how dark matter is built and how it works.

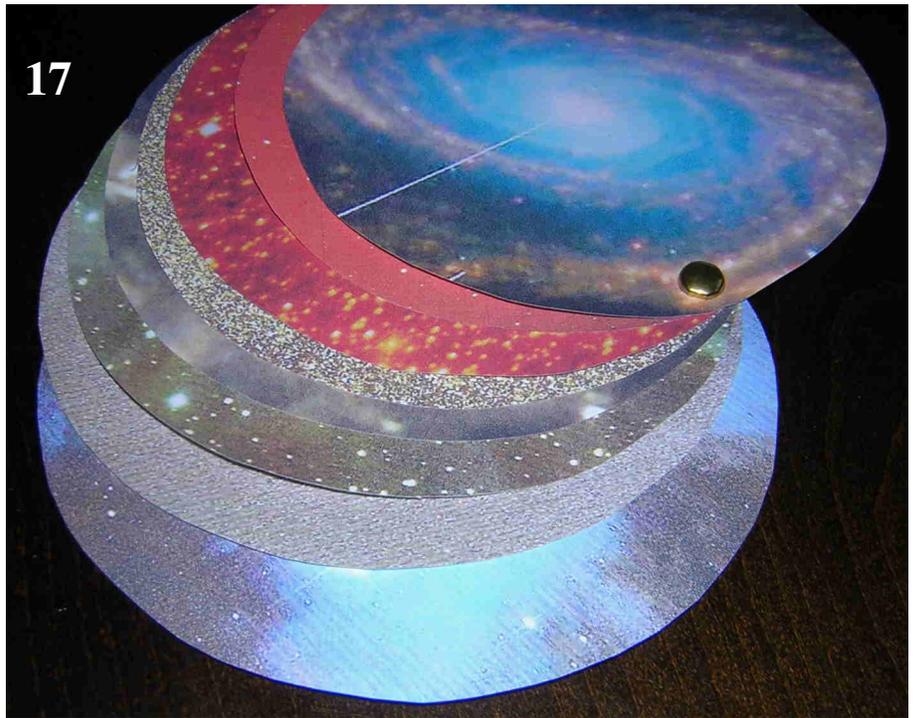

13

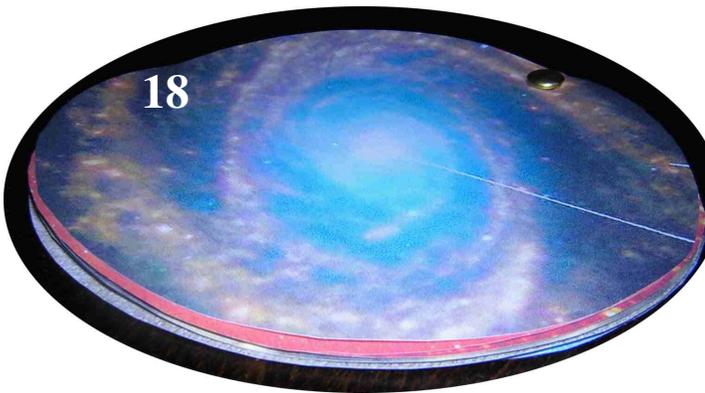

14

15

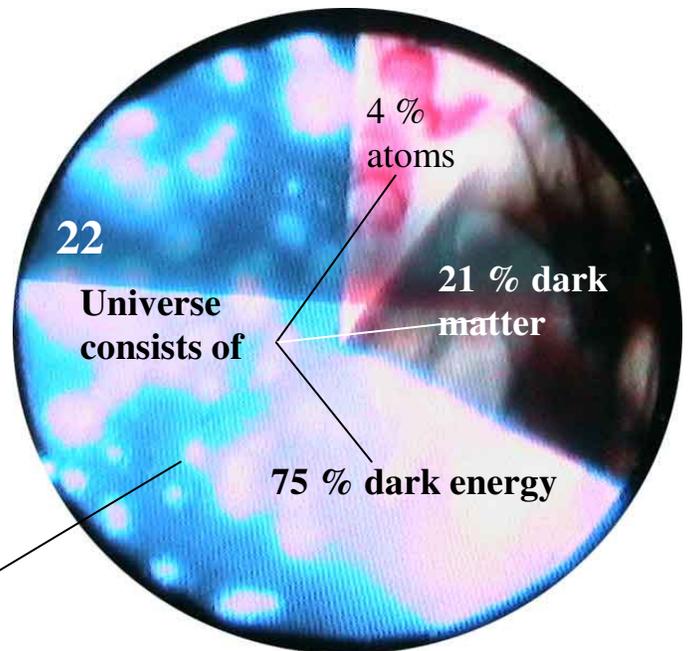

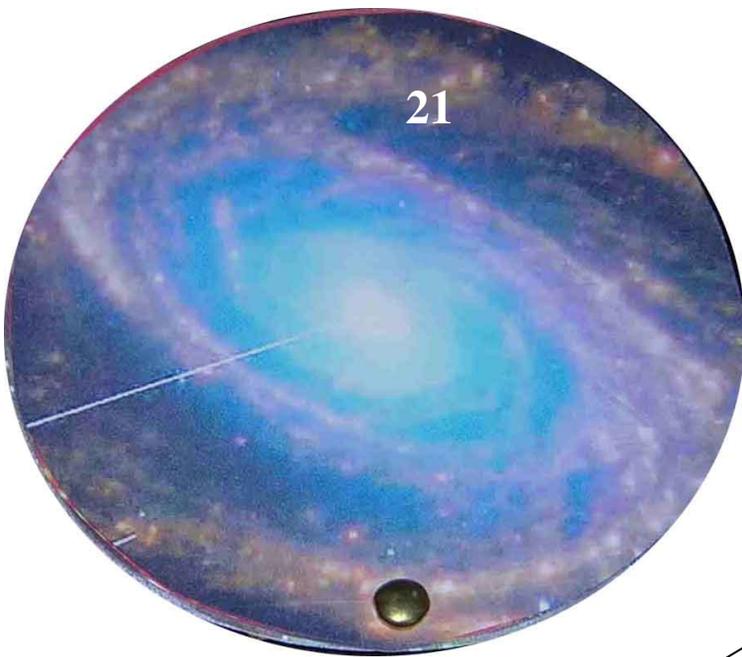

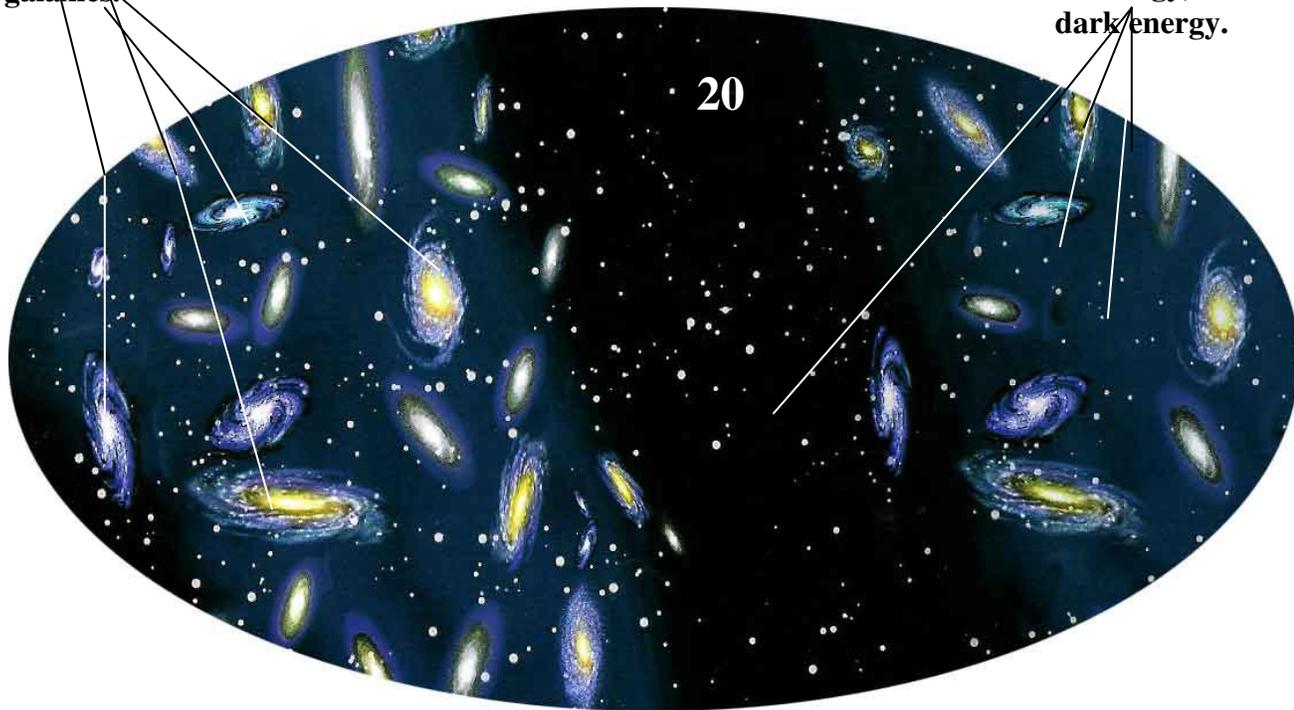

Pictures 16 and 17 illustrate seven worlds of vibration or seven dimensions. Four of these worlds of vibration consist of koino matter (ordinary matter) and three of anti matter. The most probable scenario is that the red, yellow, blue and green colours symbolize four vibrational levels of koino matter while black, white, grey or orange symbolize three vibrational levels of anti matter.

At the centre of the galaxy (The Milky Way) see a white light. This light is an illustration of the galaxy's inner world. In the interior of the galaxy, the Milky Way, a creation of a gigantic human world is going on. The way there is a so-called black hole which is also at the centre of the Milky Way. This black hole is an easy way there. At the same time the black hole is a gate at a certain level of vibration/frequency corresponding to the coming interior world of the galaxy. This gate only opens to matter in the form of celestial bodies which exist at the correct level of vibration/frequency. Without the binary star system no celestial body would be able to pass the gate. The celestial bodies are needed for further construction of matter in the interior of the galaxy or supply of celestial bodies for further creation. When all celestial bodies disappear, the seven above-mentioned worlds of vibration will also disappear, thus dark matter will be transformed into another form of matter. At the same time, the Milky Way will turn into a so-called "dark galaxy."

Dark matter-1 exists in the galaxies.

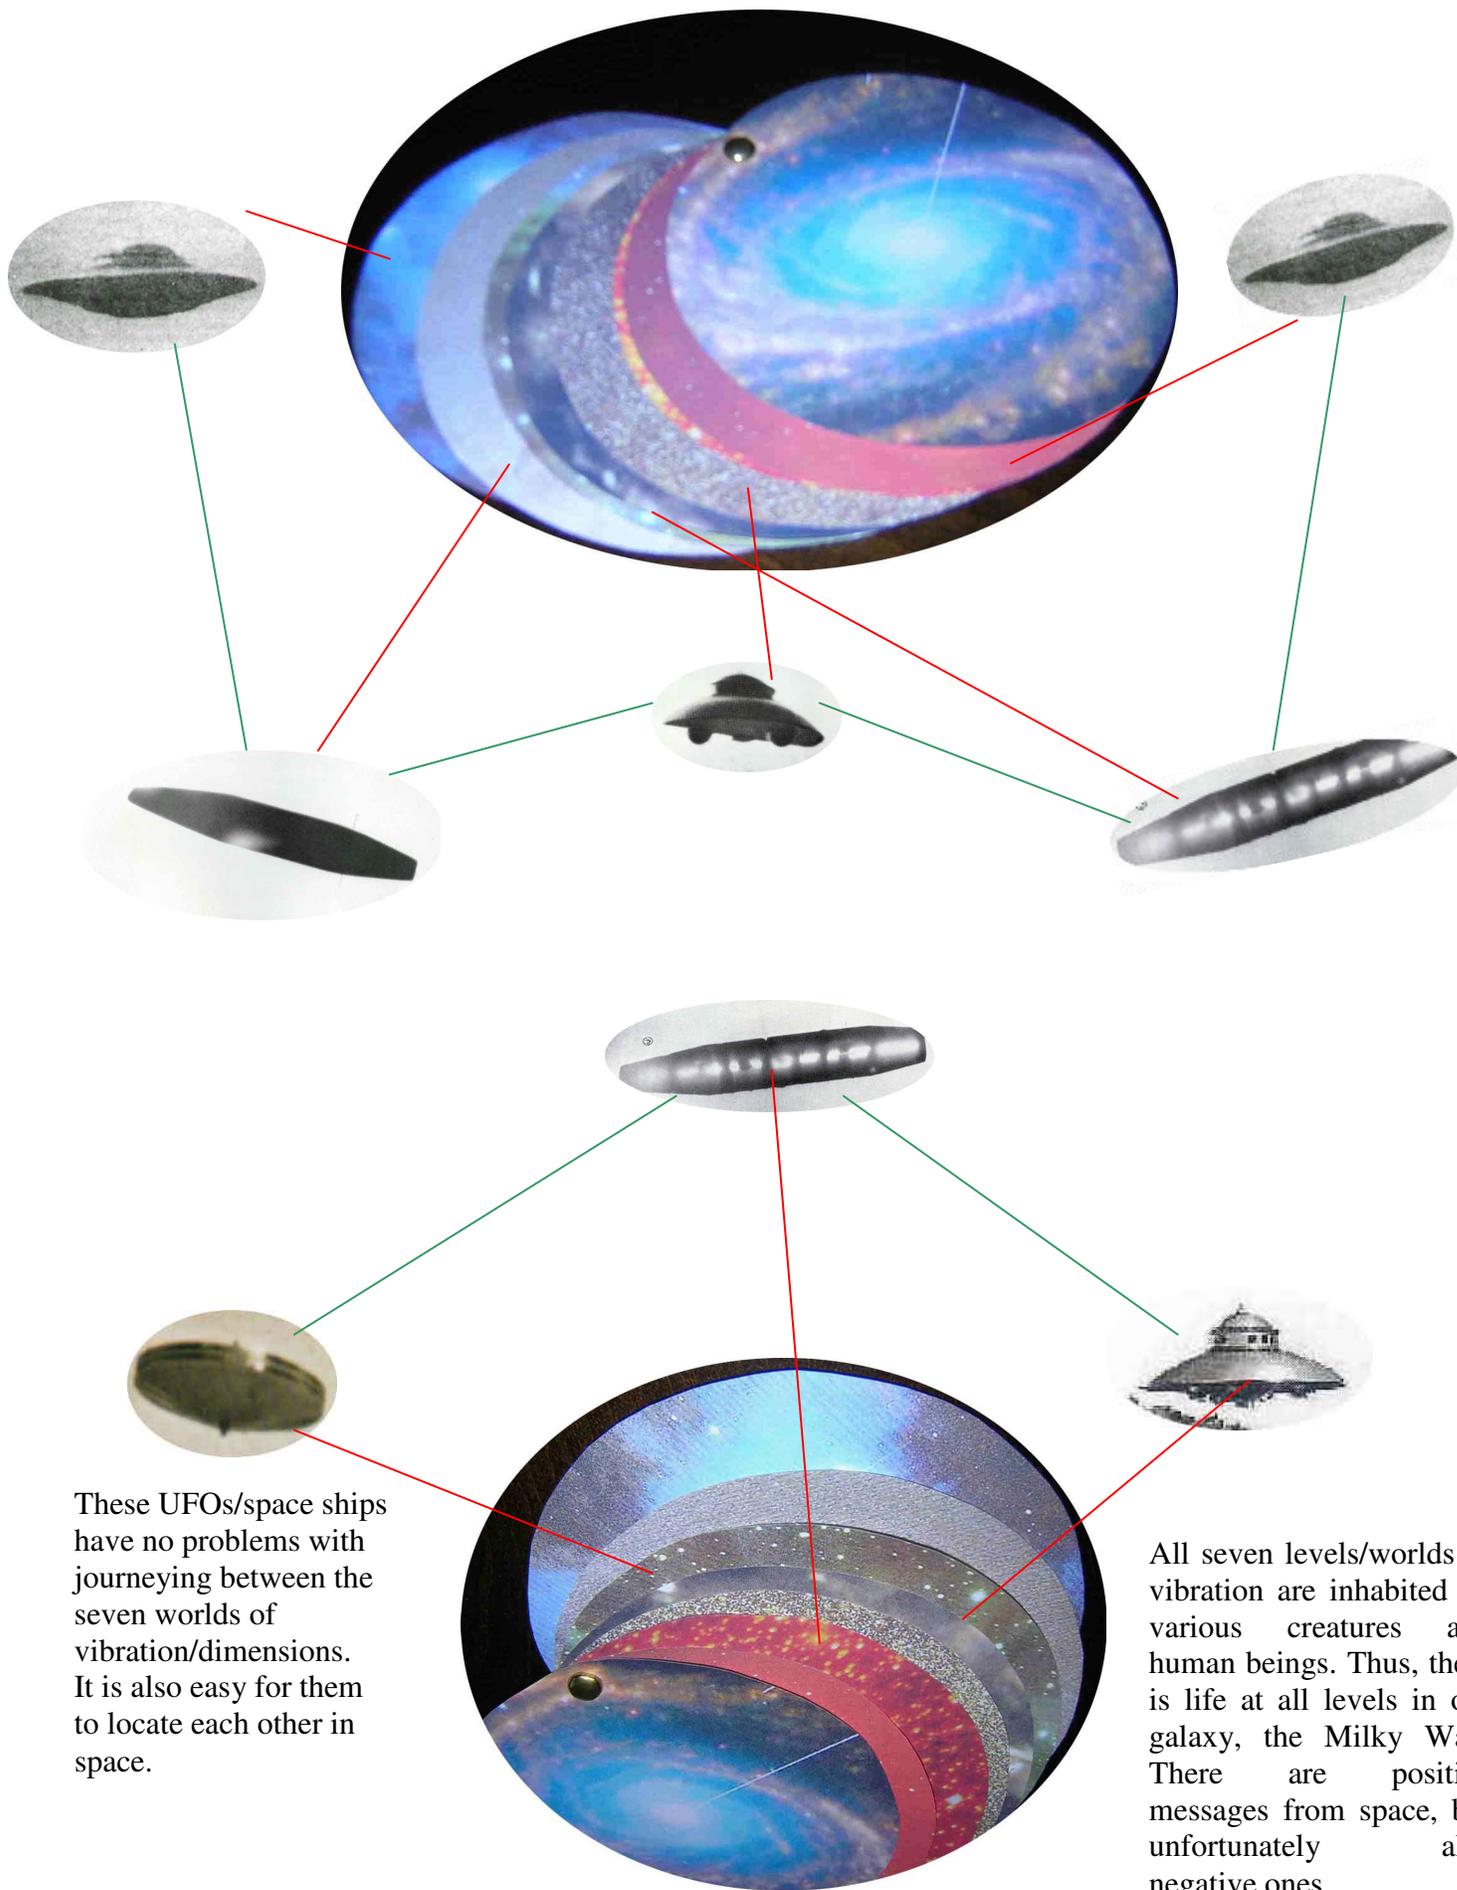

Dark matte-2 exists between the galaxies as energy, so called dark energy.

Science's latest creation is the Standard Cosmological Model. Which is the relation between this model, picture 22, and micro cosmos? If we compare picture 22 to 21 and 20 we get the following facts. It has been established that Universe consists of 4 % of atoms, 21 % of dark matter and 75 % of dark energy, this without any knowledge of what Universe is. This model is Utopia and does not work in real life. Our galaxy, the Milky Way, is built of 100 % atoms. Dark matter-1 is only to be found in the galaxies, see pictures 1-21, while dark matter-2 is 100 % dark energy. This energy only exists between the galaxies. The Universe in which we exist does not expand; dark energy has nothing to do with mass.

The only correct guess from scientists is that the galaxies move much faster because of dark energy. That is correct, the only thing that is correct in their research and above all through observations in Universe. But when it comes to the directions of the galaxies, they have not got a clue. We are still talking about Universe. Science is the most serious issue there is, in which Life and Death are parallel. This subject is not for philosophers. When we are talking about Universe, none of the issues above fit in. – The Cosmological Model may be better off in the world of fairytales than in real life.

Traffic between the 7 dimensions/worlds of vibration

These UFOs/space ships have no problems with journeying between the seven worlds of vibration/dimensions. It is also easy for them to locate each other in space.

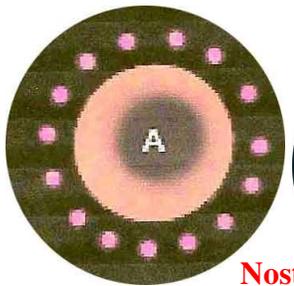

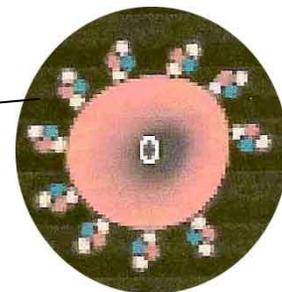

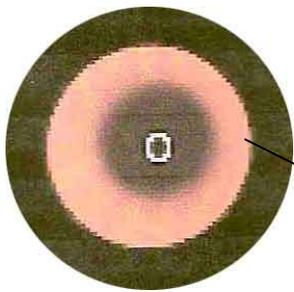

All seven levels/worlds of vibration are inhabited by various creatures and human beings. Thus, there is life at all levels in our galaxy, the Milky Way. There are positive messages from space, but unfortunately also negative ones.

Human beings, peoples, blood groups:

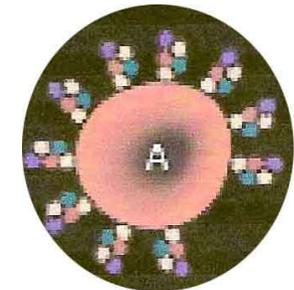

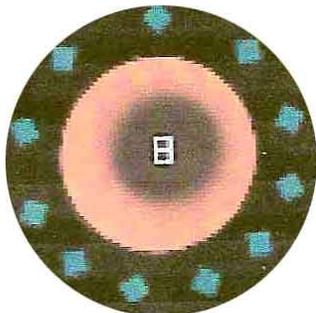

Rh-

Rh- , Rh+

Rh+

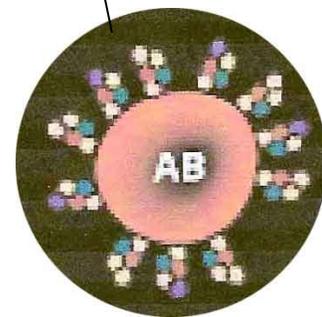

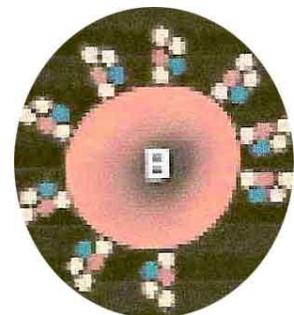

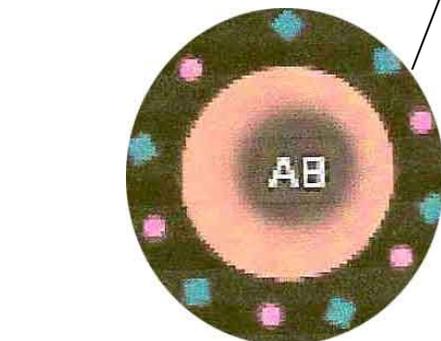

Nostradamus

Who can be vegetarians???
It's easy for Rh+.

And even easier for
ORh+, and ARh+

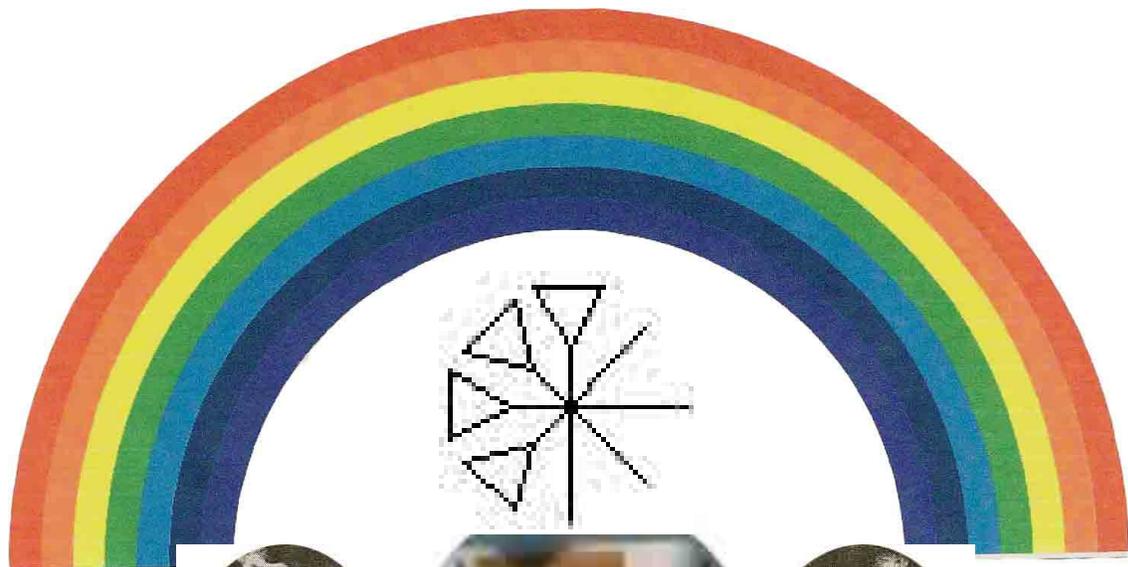

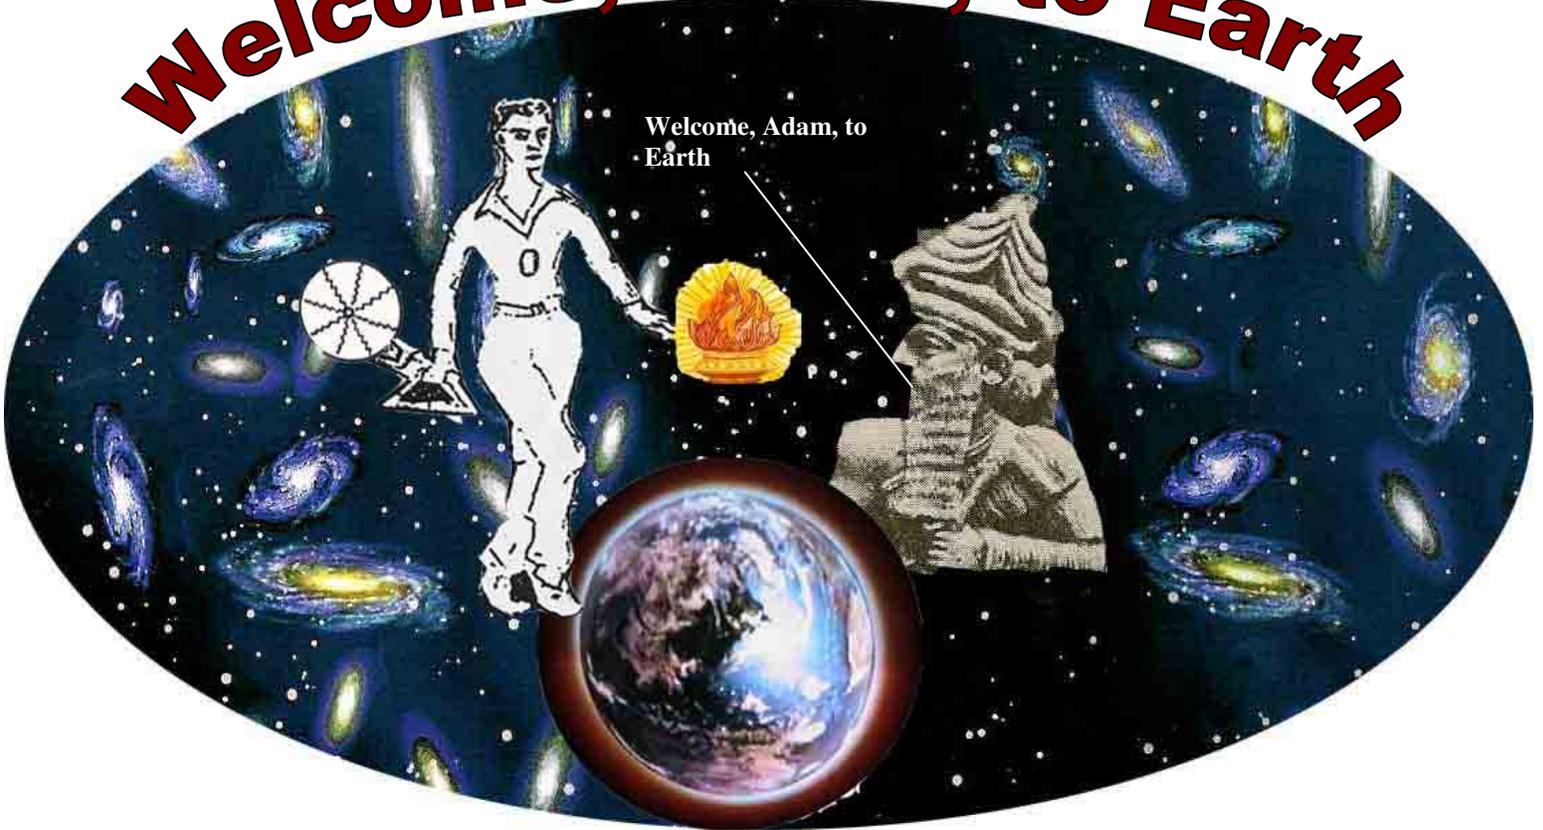

People belonging to blood group Rh- have their origins in the three negative worlds, i.e. worlds of anti matter, while people belonging to Rh+ come from the four positive worlds, i.e. worlds of koino matter.

Knowledge as means of transport. Each human being has a soul. Your soul is power formed as energy. The soul always exists at a certain level of vibration. In common language we call them levels of knowledge. Through knowledge, you can increase or decrease your level of vibration. If you have solid knowledge of the world you live in, you can substantially increase your own level of vibration. After life on Earth your soul automatically finds the level of vibration that corresponds one of the worlds of vibration. There you can be reborn, reincarnated. In other words: **Knowledge is Life and Life is Knowledge**. Your soul can be compared to a spaceship. However, if you lack knowledge problems may arise, you become uncertain and critical. Wealth, faked knowledge, illusions and lies do not count.

Science and Religion

Welcome, Adam, to Earth

Heavenly Adam – Earthly Adam

Heavenly Adam comes from a higher world far away outside our Universe. ‘Adam’ in Hebrew means ‘Man’, in other contexts it means ‘Father’. Man is the crown of Creation and there is no higher creature than Man. Everything surrounding Heavenly Adam, our Universe, is called science. He was the original light-bringer, in other words: ”Life and knowledge were spread as a valuable message. He as well was a true Master of the Masters.”

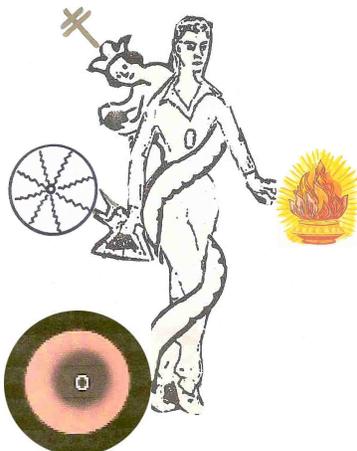

His **sign** was **Aries** and he always had **a son and a daughter** in his marriage according to “**male birthright**”.

The only role he has played, as a father, was the most important event on this planet. He belonged to blood group

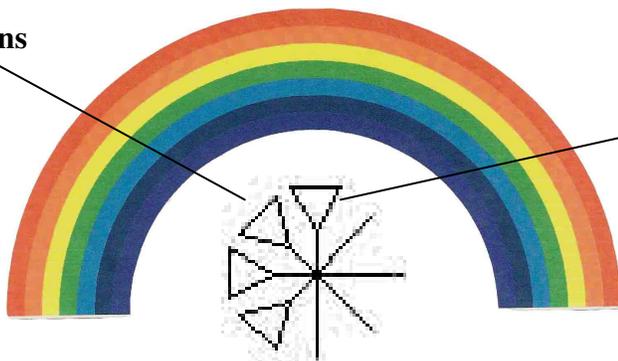

ORh+ In the original Books of Moses we could also read about this Adam. He will go back to the higher world. He also had the fig tree as a hidden symbol.

= **birthright**

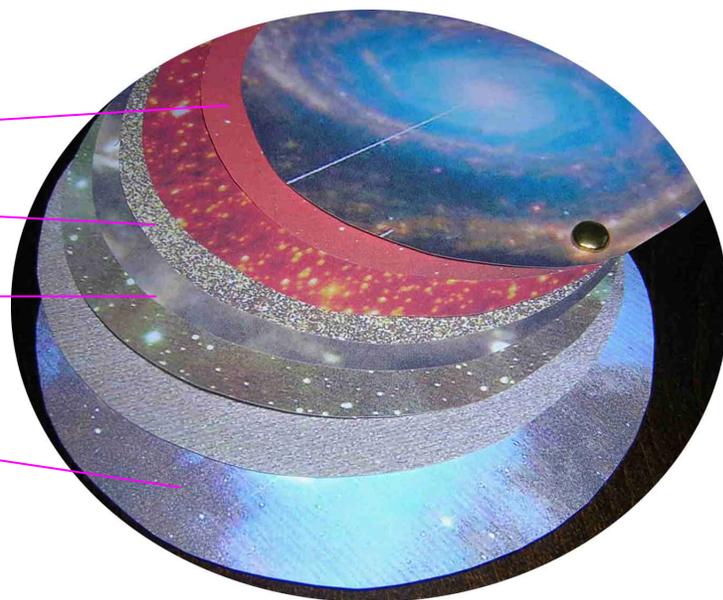

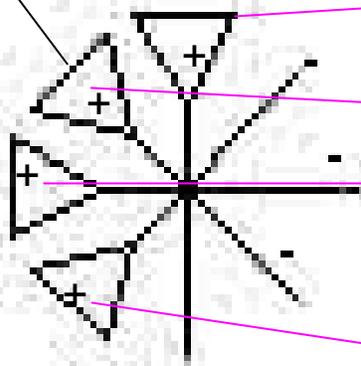

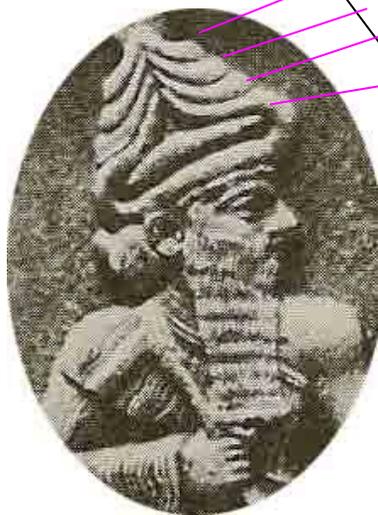

male generations

His signs

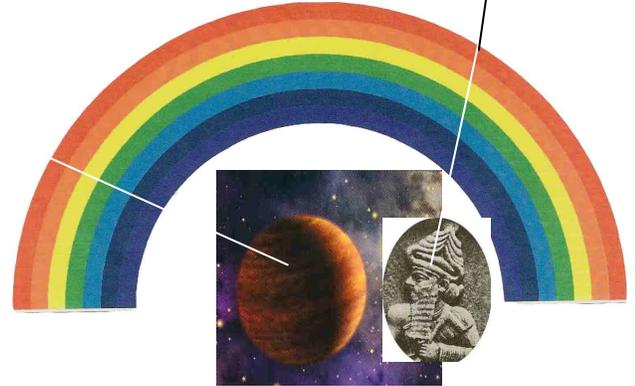

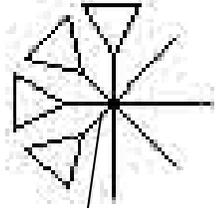

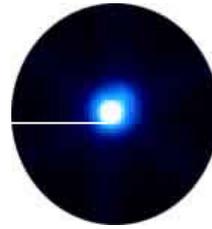

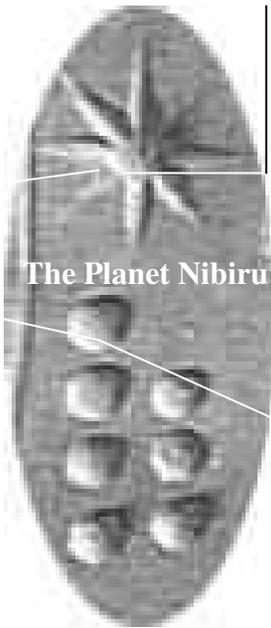

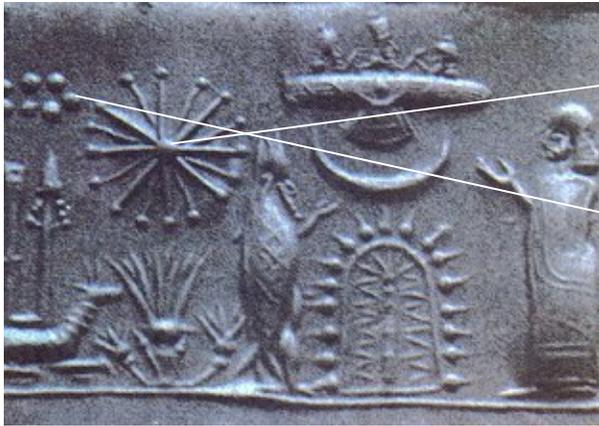

Anu was the father of the gods, master and king in the well-developed Sumerian kingdom. Nobody could call him in question. He is a powerful guardian in our galaxy. We could call him ‘Master.’ Noah and he signed a covenant, a covenant symbolized by a rainbow/arc of light.

In his sign we find that he rules/monitors four out of seven positive worlds or four worlds of koino matter. We find the same symbolism in his tiara which actually consists of the positive worlds or four worlds of koino matter. But he does not have anything to do with the three anti-matter worlds, the negative worlds, he does not rule there. This sign is more than seven thousand years old. When the neutron star AN arrived and finished life on Earth, he and his closest friends moved to the planet Nibiru which orbited AN. Also Michelangelo knew that he is gone from Earth and lives on another planet. We can see that quite clearly from his painting. Also a planet can be called Heaven.

The neutron star AN/Nemesis

A cigar-shaped spaceship which orbited and parked between the Earth and the Moon. The picture symbolizes the ancient Sumer in AN's/Anus's time, before the flood. During the flood, a number of gods and goddesses left the Earth and went to the planet Nibiru.

Revelations tells the story of a nameless God/Lord who is in Heaven, sitting on his throne encircled by a rainbow. There is no particular definition of Heaven but each and every celestial body can be a Kingdom of Heaven. In this case the planet Nibiru is Heaven. Furthermore, the whole Revelations is based on the return of the neutron star AN/Nemesis. Revelations confirms that Anu exists on the planet Nibiru, the symbolic rainbow unmarks him. This guardian/master is not only preoccupied with science and religion but also with politics. I believe he is an active member of the Galactic Council. The Council also monitors the Earth's development and its journey towards its destiny. To call this guardian/master the creator of Universe is outright offensive and insulting. Spreading false and invented rumours about a person or God is the worst thing you can do. A civilized human being ought to know that a microscopic God, known also on this planet, and compared to the size of our Universe is not capable of such creations.

Those who possess more insight and knowledge about the space world, e.g. astronomers, scientists, researchers soon arrive at the conclusion that no God has created Universe, this is a fictitious fairytale. When science states that Universe is infinite, would it then be possible for a microscopic God to create this infinite Universe? It is self evident that we cannot create a world we actually live in. Neither has science been able to explain what Universe is. Thus, the battle between science and religion is unsettled.

There is nobody who substitutes for God or works instead of him. God is an etiquette for a creature which is not human. This monitor/master has extensive knowledge and no one can replace him or fill in for him, only mismanagement and abuse would follow. He has no church or religion here on Earth needing of a substitute. My belief is that his blood group was AB Rh+. - Placing a God at the centre is religion.

He will soon be back to see what happened to the original religion during all these years.

Blood group

Blood group

The earthly Adam.

According to the Bible, this earthly Adam was humanity's progenitor before the global flood. Those who study biology and medicine certainly know that this statement is a biological utopia. No one on Earth can beget a child belonging to all four blood groups. This Adam probably belonged to blood group ABRh+, the same as his biological father. This Adam was a relative of heavenly Adam.

= **planned female birth**

Around 50% of the Earth's population belong to blood group O (Rh+ and Rh-). It is evident that these people cannot descend from this earthly Adam.

Apropos of the creation and apes: The ape is a failed DNA creation which did not become a human being but neither became an animal. The ape exists between human beings and animals and is still an ape. If you not 100% certain, you should leave things alone.

A can give blood to: A and AB
O can give blood to: All blood groups
B can give blood to: B and AB
AB can give blood to: AB

These combinations are possible within the Rh system:

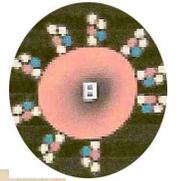

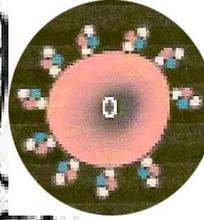

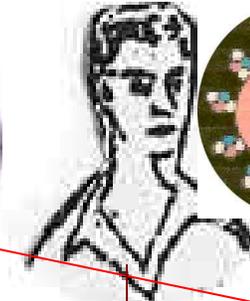

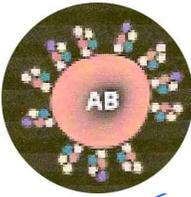

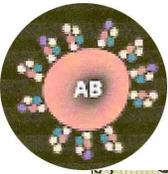

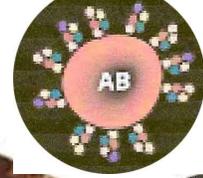

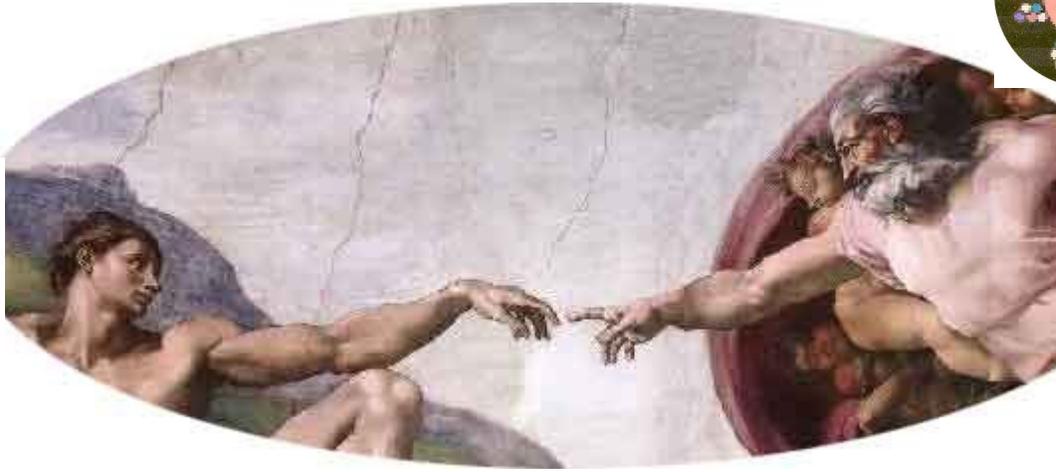

Rh+ can give blood to: Rh+

Rh- can give blood to: Rh+ and Rh-

Now, at the end of time, we need to consider three issues:

Blood group knowledge
 Nationality (origin)

Group	The whole world	Sweden
O+	38.25 %	32 %
A+	34 %	37.25 %
B+	9 %	10 %
O-	7 %	6 %
A-	6 %	7 %
AB+	3 %	5 %
B-	2 %	2 %
AB-	0.75 %	0.75 %

Adam, E

Adam, H

Eve

Typical is that she always gave birth to one son.

Main axis connected to Adam H's fatherhood which was personal and in fact had nothing to do with religion and churches

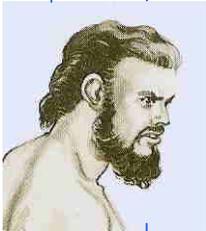

Note that the continents MU and Atlantis are missing in this main axis.

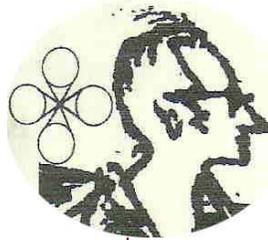

Lilith

Typical is that she always gave birth to sons and daughters.

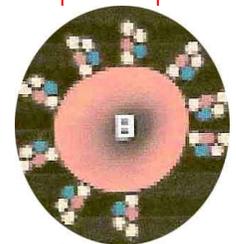

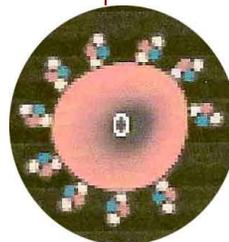

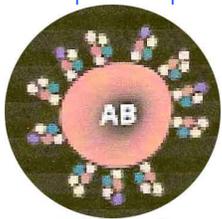

The only-begotten son

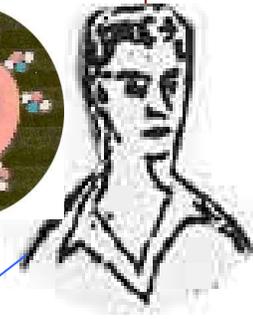

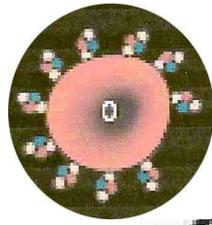

Cain

Abel

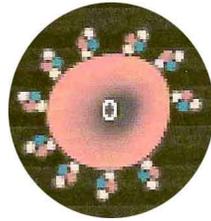

Lamech
House builder
Paternity issue

Foster father

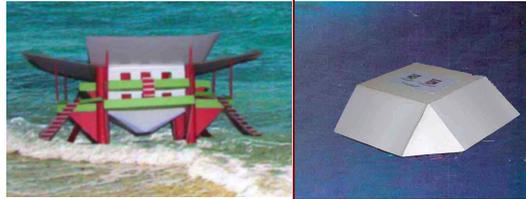

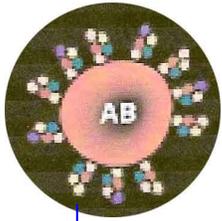

Lamech Jr,

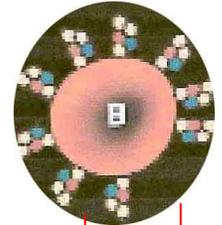

Utnapishtim
Ziusudra

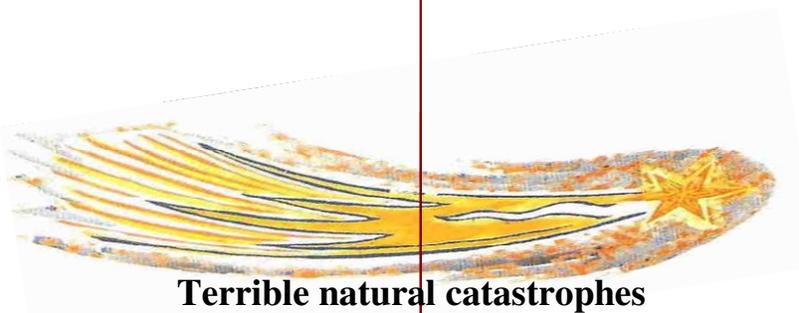

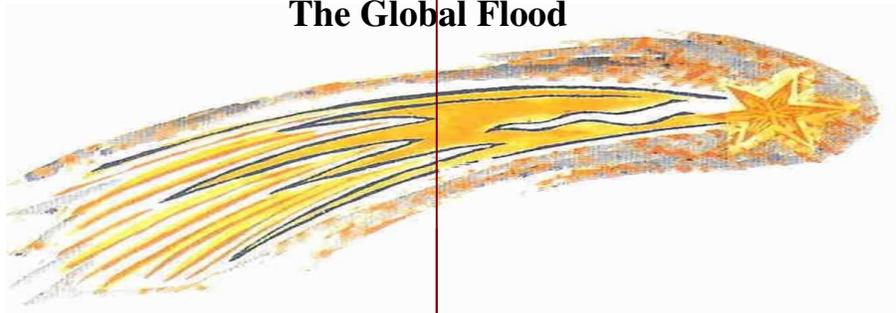

Noah
Covenant with God

The Global Flood

Tutankhamun

Terrible natural catastrophes

Akhenaten
Israel's exodus from Egypt

Paternity issue

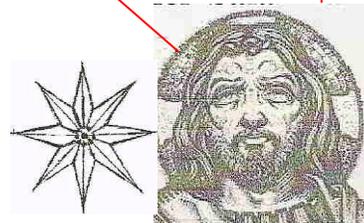

Foster father

**Daniel
Belteshazzar**

**Messiah in Babylon,
Lion of Judah**

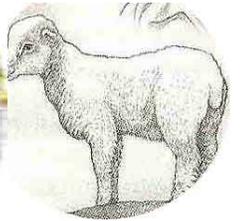

**The Lamb/Lamb of God
Israel's redeemer**

**Carpenter Josef
Yehosef bar Parechja**

Foster father

Paternity issue

The kingdom of Israel/Ephraim and its Messiah, the Levite and clerical Messiah according to Aron's and Melchizedek's church ordinance. "Lamb of God".

He was unmarried and had twelve disciples.

Studied in Egypt, e.g. magic.

The Planet: Venus

Message: Se changes in the stars.

**Tomas
Toma bar Yehosef**

Tomas's son

**Joseph Jr
from Nazareth.**

The Kingdom of Judah and its Messiah, the worldly and Davidian Messiah, "Lion of Judah.", i.e. a reincarnation of King David.

He was married to Mary Magdalene and had in his marriage one son and one daughter. He also had five disciples according to Talmud: Mathaj, Nakaj, Nezer, Buni and Toda.

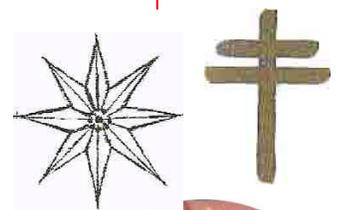

Studied in India, e.g. medicin.

The Planet: Mars

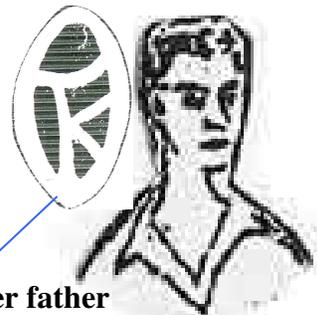

Message: see changes in the stars.

Attila, God's scourge

Saint Stephen and Christianity

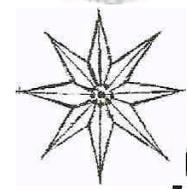

Foster father

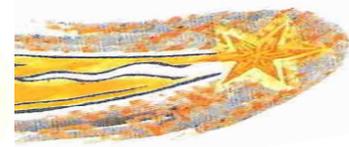

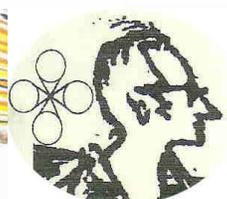

Paternity issue

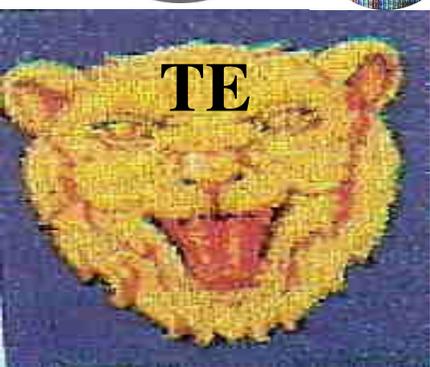

End of Time

Lamb of God and Doomsday

Vajk, The Lion of Esztergom

The Lion and the End of Time

The Lion – The Lamb – and The Scroll

Man and Her World

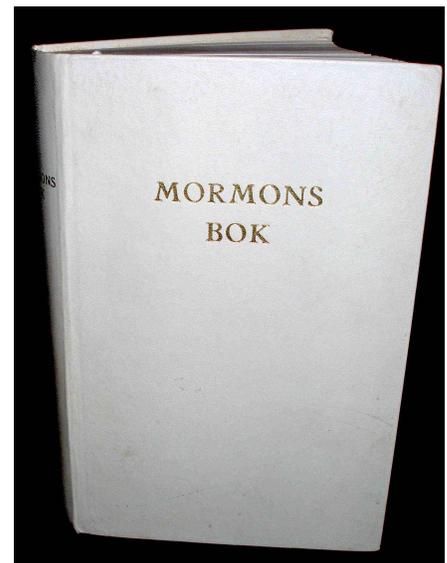

Dark matter; inside the galaxy a human world is now being created in complete harmony and silence

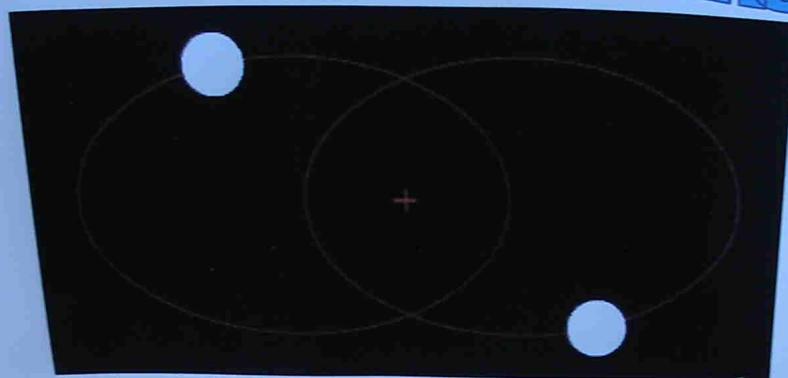

Life is Knowledge and Knowledge is Life

Read the story about the original Books of Moses.
